

Website shortcuts

This will serve as a guideline to create shortcuts for our website on mobile devices.

Android

Launch **Chrome** for Android and open the website or web page you want to pin to your home screen. Choose the page inside the website for which you want to create the shortcut for. For example: Communications. Tap the menu button and tap **Add to home screen**. You'll be able to enter a name for the shortcut and then Chrome will add it to your home screen. The icon will appear on your home screen like any other app shortcut or widget, so you can drag it around and put it wherever you like. Chrome for Android loads the website as a "web app" when you tap the icon, so it will get its own entry in the app switcher and won't have any browser interface getting in the way.

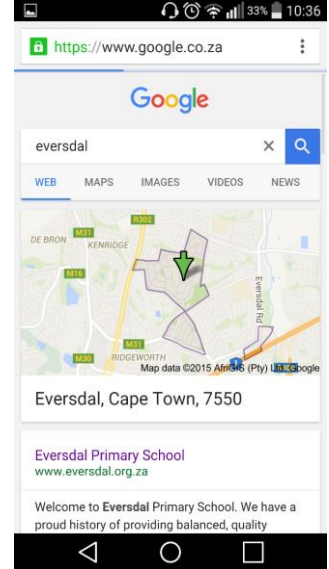

Choose Chrome

Search for Eversdal Primary

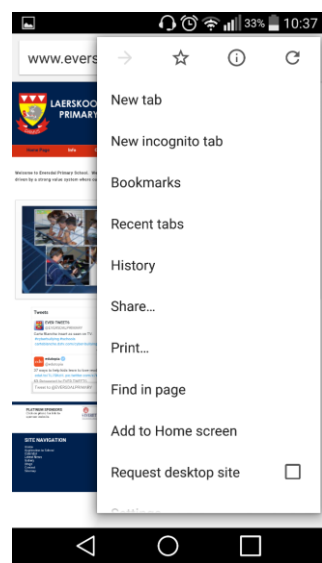

Click on the website

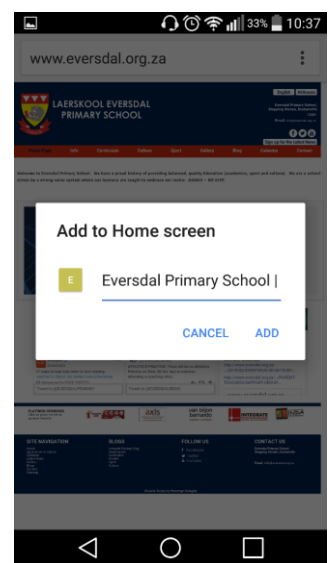

Open the page in the site

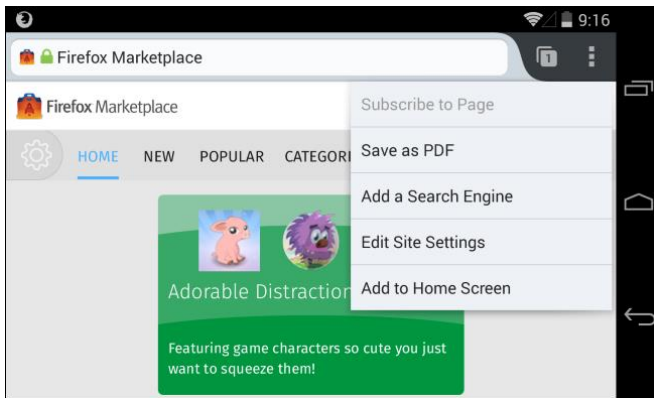

Click on the menu button

Add to home screen

Other popular Android browsers also offer this feature. For example, **Firefox** for Android can do this if you tap the menu button, tap the Page option, and tap **Add to Home Screen**. See the bottom image.

Windows Phone

Open the website you want to pin in **Internet Explorer**. Tap the More (...) button and tap **Pin to Start** in the menu that appears. Windows Phone 8.1 supports live tile updates from websites that have configured the feature, just as Windows 8 does. See picture to the right.
